An Optimal Media Solutions Initiative, A division of Times Internet Limited

"Revolutionary Agriculture Technology"; Dr Prashant Zade felt the need to save the sector

Soil based vertical farming is a revolution that was waiting to happen. Farmers in India are saddled with the annual affair of crop failure that has led to farm distress and farmer suicides. A S Agri and Aqua, a leading Agriculture Development and Agri-Tech Solutions company in India, is transforming the Indian agricultural ecosystem with soil-based vertical farming technology.

A S Agri and Aqua was established in 2018 by 10 professionals from different industries. They had a common goal – to promote innovative agricultural practices and ensure that farmers live a sustainable, self-sufficient, and independent lifestyle.

Dr. Prashant Zade, Chairman and Managing Director of A S Agri and Aqua LLP

ACHIEVING NEW MILESTONES IN FARMING YESTERDAY, TODAY, TOMORROW…

India's equation with farmers is special. Agriculture inevitably plays an integral role, not only in the development of a farmer but also in the imparting of significant farming skills which leads to the overall development of the country. A S Agri and Aqua LLP is pioneer in soil based vertical farming across India and have made its mark on the International level and brought accolades to our country.

WHY HAS SOIL-BASED VERTICAL FARMING BECOME CRITICAL FOR THE MODERN WORLD?

The burgeoning global population has given rise to the twin challenges of lowering land fertility and urbanization encroaching farming land. India is expected to become the most populated country in the world in a decade with rapid urbanization already evident in all parts of the country. A S Agri and Aqua has brought an efficient solution by way of Soil-based vertical farming to meet these challenges. Vertical farming of the Hydroponic and Aquaponics kind (i.e. Water-Based) already exists in India but they have several limitations, including the restriction of crop varieties.

A S Agri and Aqua with its consistent focus on scientific research and development became one of the pioneers in soil-based vertical farming while offering farmers unprecedented benefits. The risks posed by pests and changing weather patterns are kept at bay by this technology. But most significantly, this soil-based technology ensures significantly higher yield in terms of quality as well as quantity, even while requiring 85 per cent less water, 85 per cent less labour, and 99 per cent less land.

The raison d'etre of A S Agri and Aqua's journey was to technologically support the underdeveloped turmeric farming sector. That technology has now been extended to improving the overall lifestyle and living standards of Indian farmers and building a sustainable future. Beginning with successfully producing high-quality turmeric in vertical farming polyhouses, the company has expertise in producing a wide range of crops through soil-based technology, like potatoes, tomatoes, soyabean, sweet potatoes, ginger, and much other produce.

A S Agri and Aqua's vast know-how and expertise is evident in the regular training programs and workshops to create awareness and help the Farmers understand the benefits of soil-based vertical farming.

Along with soil-based vertical farming, A S Agri and Aqua also deals with providing turnkey solutions in sectors such as aquaculture and fish farming, contract farming, turmeric trading, Rural Digital Connectivity (E-Village App), Healthcare And Food Supplements (Vishwaayu), and other developmental projects and schemes.

A FRIEND OF THE FARMING COMMUNITY INDEED

A S Agri and Aqua's goals for the future are equally surprising -- one where they fully transform the technologically stagnant Indian agriculture ecosystem through innovation. The company aims to partner with the government as well as national and international organizations to formulate, develop and enhance agriculture in India with advancements in technology.

According to A S Agri and Aqua's spokesperson, bringing development to the agricultural sector would enable farmers to transform their occupation into a vibrant sector while ensuring viable income and improvement in their status in the marketplace. "At its core, A S Agri and Aqua is on a mission to create a greener, sustainable, and self-sufficient future through innovation and technology," the spokesperson added.

Dr Prashant Zade, Chairman and Managing Director of A S Agri and Aqua LLP has built a world-class enterprise in the agriculture industry in a short span of time. He is experienced in implementing large media projects across various industry segments. Dr Prashant is adept at diagonal thinking, creative marketing, critical business analysis and team building. He works as a scale-up specialist and an eco-thought leader for his company. Under his tutelage, the team at A S Agri and Aqua LLP has created a globally renowned company in the field of agriculture and aquaculture.

BIOFLOC AQUACULTURE

Just as Agriculture, A S Agri and Aqua LLP have done a revolution in aquaculture as well i.e. 100 Acres yield in 1 Acre of land. It is called Bio Floc Technology, here they grow fishes like Tilapia, Pabda, Venami Prawns and can get a crop cycle of 4 months which give a significantly high return on investment making this a very profitable venture, to see this live visit their live project at Ghoti, Nasik, Maharashtra. The latest technology in fish farming and prawns farming ensures lesser resources and expenses while producing more yields. Open Dam and Pond Fish Farming – Rohu, Katla, Mrigal, Cyprinus and Rosenberg Prawns.

RECOGNITION OF EXCELLENCE

Dr Prashant Zade has won numerous awards including Fellow of Royal Society of Arts and Commerce London in January 2020; Agrotech 2019 – Awarded first in the private category – Awarded by Dr Punjabrao Deshmukh Agricultural University, Akola; AgroVision 2019 – Nagpur – Certificate of Recognition; Society Iconic Indian – Excellence in Agriculture Innovation – Mumbai 2019; World Icon Award–Awarded by Dushyant Corporation – 21 July 2019 – Colombo, Sri Lanka; Product Innovation Award – Awarded by Dubai Entrepreneur Forum for Agriculture and Aquaculture 2019; and Innovation in Agriculture – Awarded by Amhi Parivar Ajman India Group – Ajman 2019.

Advantages of Soil-Based Vertical Farming

- Year-Round Quality Produce
- Manifolds of Higher Yield Per Acre
- Controlled Environment (Polyhouse)
- Less Carbon Footprint
- Elimination of Agricultural Runoff
- Abandoned or Unused Properties Can Be Utilized
- Reduced Risks from Pests and Climate Change
- Extremely Minimal Chances of Crop Failure
- Sustainable Production for Urban Centers
- Save 85 Percent Water, 85 Percent Labor and 99 Per Cent Land

New logistics app a boon for shippers, transporters

Swarup Bose, Founder & CEO and Rajneesh Raman, Co- Founder & COO, Celcius Logistics Solutions Pvt. Ltd.

India has been known for its logistics deficit for a long time. And technology ingression into logistics sector has been even less in India. But in the recent times a number of new entrepreneurs are providing India's first online platform for cold chain. The phone app by Celcius is expected to help shippers connect with the transporters all over India. This app has both reefer as well as cold chain providers in its services. The lack of cold chain which has resulted in wasting of billions worth of agricultural produce is now all set to become history with the advent of the Celcius app. The app even helps the shipper get the best quotes from transporters along with the details of the services provided by them.

Founders of Celcius Swarup Bose and Rajneesh Raman complete the picture of management of this new age enterprise. Swarup has over 16 years of experience in cold chain logistics while Rajneesh has long experience in heading tech and business integration, leading sales and marketing strategies, and spearheading new initiatives for well-known organisations like Rediff, Careers 360, and TIL Ltd.

Shippers can connect with transporters across 40 plus cities all over India according to their need for speed and efficiency in delivery. There are over 60 cold storage facilities and 200 partners enlisted with Celcius. This network of logistics service providers is growing wider by the day. The cold storage facilities have been inspected and certified by Celcius and the shippers can book food and pharmaceutical complaints if they find deficiencies.

The users can even access the round-the-clock helpline service of Celcius to track the movement of goods. Best-known names in the transport business in India who have used Celcius app have expressed a sigh of relief after having experienced the ease with which business can be done using Celcius app. Most users of Celcius app aver that there was a felt need for such an app which could help shippers take informed decisions regarding their consignment. The professionalism shown by Celcius team in understanding the needs of the shippers and consignees becomes evident by the effusive appreciation given by the users of the app.

Organic fertilisers- The way ahead for the new Indian agriculture sector

It is a well-established fact that pesticides and chemical fertilisers have caused havoc in agriculture for both the farmers and the consumers. New players in the field of organic agriculture like Warkem Biotech have over time, made a paradigm shift in bringing sustainable farming methods with the help of new technology.

Technocrats founded Warkem Biotech Pvt Ltd in 1978. This company has been engaged in manufacturing high quality hydrolyzed proteins and various bases meant for microbiological, pharmaceutical, nutraceutical, agricultural industries. Pushing the envelope further, Warkem Biotech established a separate Organic agriculture division 'WarkemAgri' which provides 100% Chemical-free farming inputs manufactured using high end technology. WarkemAgri is an Indian manufacturer having the largest range of 47 organic certified (Control Union) recognized products that encompasses the complete range of Organic manures , Organic soil conditioners, Biostimulants like HiFoliar Nutrient, Soluble Nutrients, Bio-fertilizers, Bio-pesticides, Bio-nematicides, Pheromone traps, etc.

Dr Rajas Warke has been instrumental in bringing state-of-the-art instruments and innovative technology to the agricultural division at Warkem. On the other hand, Dr Kavita Khadke is MD from JJ hospital, Mumbai who carries the mantle to promote 100% chemical free farming to reduce on the alarming instances of several health hazards such as cancers and fertility issues.

WarkemAgri
Organic Farming Solutions
A Division of Warkem Biotech

Dr. Rajas V. Warke, Director, Warkem Biotech Pvt. Ltd.

Dr. Kavita M.Khadke, Technical Director, Warkem Biotech Pvt. Ltd.

Excessive use of chemical fertilizers and pesticides, in the recent past has resulted in soil erosion, compaction, acidification and salinization. This has resulted in severe deterioration of soil quality . Warkem's products provide a win-win situation both for the farmer and consumer as it provides complete organic solution to farming; thus improving both soil health and yield. Warkem's mission led to the development of best-in-class products which assist farmers to do 'good input high yield' agriculture. Dr. Kavita rightly reflects on the ideology followed by WarkemAgri as she says, "Organic Farming will be instrumental to support the 'Aatmanirbhar' make-in-India mission and we believe in Empowering the farmer for sustainable agriculture. The idea is to tap and unravel the strength of traditional Indian farming with latest innovative Biotechnology based approaches to empower the farmer with quality produce in terms of luster, taste, shelf life and yield."

A new revolution in the making by a green start-up

In the recent past there has been a remarkable increase in people's interest in conservation and sustainable living. Neogroup's promoter Sachin Phadtare has always believed that economic development can be achieved without disturbing environmental equilibrium. Teaming millions have also felt the same about leaving the confines of urban living and seeking a better life and living standards in the rural settings. Neogroup has a multitude of activities including banking and finance, IT services and real estate development and its portfolio has only increased with every passing day. Neogreen Ventures provides services to its clients that combine high tech farming and agro based industries even while owning land where they could build a decent farm house.

Hydroponics: Controlled Environment for Optimal Growth

Neogreen's clients can take advantage of its expertise in agriculture, tree plantation, technology driven farming methods, fisheries, cattle farming, poultry, renewable energy sourcing methods like solar panels and gobar gas, etc. The experts in the company help the clients in vertical farming, hydroponics and vermicomposting. The company is soon launching its ambitious artificial intelligence based hydroponics farming project. It will help to produce fresh medicinal and aromatic plants. The project will be announced for the general public on 26th January 2022.

NEOGREEN VENTURES PVT. LTD

Neogreen Ventures Pvt Ltd has received the prestigious 'Best Innovative Product of the Year -2021' award for 'The Nest' project located at Nashik. This project opens up new avenues of housing in the midst of a rustic village life. By switching over to renewable sources of energy and recycling the refuse, the nest provides a natural habitat to its residents and helps in reducing their carbon footprint.

Bio Floc: Sustainable, eco-friendly aquaculture

"Be the change that creates an impact in the lives of today and tomorrow"

Sachin Phadtare, Founder, Neogreen Ventures Pvt. Ltd.

Kala Biotech – One of the pioneers in innovation of Cold Storage Technology

Kala Group, established in 1991, has been among the leading manufacturing & services provider in Engineering, Power Sector, Biotech, Refrigeration, CA/ Cold Storages, Defence, Environmental Solutions, Telecom, and Infra Projects and having its business footprint in India, USA, Europe, Australia, Middle East, Oman, Kenya, Uganda, Burundi, Tanzania, Mauritius and Nepal.

Kala Biotech a pillar division of Kala Group, has a state of the art manufacturing facility at Pune and is equipped with the latest and modern technologies to offer Innovative and qualitative products with international standards. Kala Group is opting the success under the visionary guidance of its Manoj Kumar Phutane, Managing Director and his brothers – Sanjay Kumar Phutane, Executive Director and Praveen Kumar Phutane, Finance Director.

Kalavati Phutane, Group Chairman, (L to R) – Praveen Kumar Phutane,Finance Director, Manoj Kumar Phutane, Managing Director, Sanjay Kumar Phutane, Executive Director

Kala Biotech is engaged in manufacturing, supplying and exporting a wide range of products and services which includes Controlled Atmosphere / Modified Atmosphere Storage Facilities, Cold Storages, Cold Rooms, Ripening Chambers, Biotech Laboratories, Walk in Chiller & Freezer Rooms, IQF & Blast Freezer Rooms serving the wide temperature range from 0°C to 40°C along with relative humidity between 50 to 95%.

Recently, Kala Biotech has successfully developed a Controlled Atmosphere Onion Storage Structure (CAOSS) in Technical collaboration with ICAR-DOGR to reduce substantial losses and increase shelf life of onions. CAOSS are supported with its own Kkloud™ system - An IOT based system providing Innovative features like Remote monitoring, Controlling, and Data Analytic system, System health updates on refrigeration and electrical parameters, Live reports on available stocks, and market rates etc.

This innovative and next generation indigenously developed technology under Make in India initiative, provides end to end solution including Integrated Pack House, CA Facility, Pre-cooling, Ripening, Grading & Sorting System and Conveyorized Material Handling System to improve the efficiency of supply chain of onion.

Kala Group's strives for customer centric focus by offering best product and services using advanced technologies to ensure utmost customer satisfaction and delight.

For further details contact:
kalabiotech@kalabiz.com
Web : www.kalabiotech.com

CA Onion Storage will be a great help to Farmers & Farm Produce Companies with:

- Relief to farmers from distress selling during the glut period.
- Quality produce with fewer storage losses
- Increased availability of onions for domestic consumption and export
- Useful for most of the horticulture products and crops
- Multiproduct suitability with Temperature & Humidity controlled
- Aids in doubling a farmer's income
- Price Stabilization at the market place, strengthening the onion value chain
- Contribution to reduce the carbon footprint with minimum storage losses

KALA GROUPS INCEPTION WAS LAID WITH THE VISION TO OFFER KWALITY OF BEST INTERNATIONAL STANDARDS, ABILITY TO MEET EXACT CUSTOMER NEEDS, LOYALTY TOWARDS THE STAKEHOLDERS, ADAPTABILITY WITH THE RAPIDLY CHANGING TECHNOLOGIES & MARKET DEMANDS, TO ENHANCE THE CUSTOMER EXPERIENCE & VALUE FOR MONEY WITH ITS PRODUCTS AND SOLUTIONS

Check out Sharpex: One of the leading choice of an urban gardeners

Sharpex was born from the aspiration to connect garden lovers with the best quality of garden tools from across the country. The company specializes in manufacturing high quality garden tools, including secateurs, loppers, pruning saws, lawn mowers, wood chippers, shredders etc.

Incepted in the year 1975, Sharpex has emerged as a foremost manufacturer of superior quality hand tools on par with international standards. Under the able leadership of Aroon Patel, whose constant efforts have earned steeply rising turnover that enabled the company to engrave a niche in the industry, Sharpex has earned laudable client base across the country. Over the years his unrelenting efforts have made the company one of the prominent manufacturers of garden tools & equipment available in India.

With its user friendly tools that can be used by anyone, Sharpex is also credited with promoting the concept of self-gardening. The company has developed one of India's largest selling Zero Maintenance Electric Lawn Mower, its flagship product, which is being used by more than 2000 corporate across India. One of its bestselling products is Mobile Shredder that can shred green waste and the shredded waste can be used to make compost and vermicompost fertilizer, thereby contributing towards Swach Bharat Abhiyan, where instead of burning leaves & branches, one can shred it.

Always a step ahead, Sharpex's gardening tools are some of the indispensable set of equipment which help perform a multitude of gardening tasks. The tools have been put to use in varied industry segments including Hotels and Resorts, Cement Industry, Pharma, Infrastructure, Educational Institutes, Tea & Coffee Garden, Paper Mills, Private Bungalows and Farmhouses.

Garden decor is an upcoming category where people are picking interest. Houses with even 1 bhk wants to have a green corner in balcony or terrace where they can keep plants. Sharpex's garden decor range includes pots, pot stands, pot trolley, pot hanging brackets, wood mulch, garden chair, fire pit, etc., thereby allowing customers to save on time, labour and money. Experience the joy of gardening with Sharpex!

GREVOL - A Cargo Electric Three-Wheeler Platform

Electric vehicles are set to dominate the roads of India with sales of EVs growing at expected to grow at 90% CAGR annually in this decade - to put that under perspective - that is faster than the growth rate of smart phones in India over the last 10 years. One of the fastest growing segment in EVs is the three-wheeler segment catering to cargo and passenger transportation. The growth in this segment is primarily due to lower operating cost of electric vehicles.

One of the leading manufacturers of electric three wheelers is Green Evolve Pvt.Ltd. ("Grevol"), which has launched a half body and full body cargo and passenger vehicle that is used for transportation of goods and people. The Grevol EV is one of India's largest three-wheeler in terms of size and performance, boasting a payload capacity of 750kg and tested with up to 1 Ton loads, volume of 170 cu ft and a range of 125km in a single charge.

Grevol has developed a multi-utility three-wheeler platform that can be used for multiple purposes – including cargo transport, ambulance, waste carrier, cold storage, passenger transport and any other customized use cases depending on user application.

GREVOL - Cargo - Electric Vehicle

Grevol EV can be charged with a standard 15A power socket and takes up to 4hrs to charge with standard charging and comes with a fast charging option with DC001 chargers to charge vehicle in under 2 hrs. The vehicle gives a mileage of Rs. 0.60p per km compared to Rs. 2.50 per km for CNG and Rs. 5 per km for Diesel vehicles, which results in savings of 80-90% on fuel costs. In short, driving the Grevol EV for 100 kilometres a day for 30 days a month, total monthly charging expenditure would be Rs. 1800 only, compared to Rs. 7,500 for CNG and Rs. 15,000 for Diesel. Additionally, Grevol EV requires very little maintenance as there are no moving parts or engine, with 50% lower maintenance cost compared to combustion engine vehicles.

The Grevol Founders consist of second-time entrepreneurs and senior industry professionals having established successful business in the fields of renewable energy, energy storage, automobiles and manufacturing. The Company has filed over 8 patents and develops it's lithium ion battery packs in-house, led by a core team of experts from IITs. Grevol has also co-developed the drive train of the vehicle with a German based motor OEM.

The Company is fast expanding its dealer and distributor network across the country to cater to a country wide network of service and customer touchpoints. The Company is poised to become the market leader in the electric 3W category and presently under process of setting up a Rs. 100 Crore (or 12,000 annual units) manufacturing facility to meet the demand for electric vehicles.

START-UP EFFECTIVELY SUBSTITUTES PLASTIC WITH AGRO-BASED PRODUCTS

Even as plastic has become the bane of modern lifestyle prompting many countries to ban or restrict the usage of plastic products new entrants in the field of agriculture have started to provide better solutions to substitute plastic. IBANSS, a Noida based start-up founded by Anubhav Mittal, uses bio based materials made from agro waste and bamboo to effectively substitute plastic. This company has empowered poor and marginalized farmers by sourcing raw material directly from them.

Anubhav Mittal, Founder - IBANSS

Ibanss Bamboo Ware

The fact that India has abundant low cost natural resources that can create high value addition which in turn benefit the community has been the prime mover for IBANSS's initiative. Another focus area for the company has been the use of agro waste which can be converted into high value products. "Our focus has been to use low cost high quality raw material that is produced by bamboo processing industry as waste which can be converted into finished goods of high standards," said an IBANSS official.

Under sustainability and ESG initiatives IBANSS hire local youth and train them to be skilled labour. The company also encourages them to take up bamboo farming and primary processing of bamboo with buy back agreements. Over 60 per cent of the workforce are women which result in diligent quality control and efficient packaging operations. Anubhav Mittal is an alumni from IIT-Delhi's 2002 batch & travelled across globe for business with decade plus experience of manufacturing & supplying the exclusive products to top global retailers.

Organic food and beautiful body

Organic foods are clearly healthier for the planet, because they support a food system that keeps out synthetic fertilizers and pesticides. Organic farming promotes a better biodiverse ecosystem that pays equal attention to preserve natural waterways, healthier soil, cleaner air, denser wildlife, better farm workers, and a balanced climate.

Remember that eating organic food increases nutrients, such as Vitamin C, iron, magnesium, and phosphorus in the body. We got in touch with Radhika Iyer Talati, Founder of Anahata Organics to share organic foods that one must consume regularly for a fitter, healthier, disease free life and a beautiful body.

Organically grown fruits:

There are several farms which are growing fruits that are completely organic and pesticide free. These fruits do not contain any harmful chemicals or pesticides and are beneficial for health in every way, not to mention that they also taste a lot better.

Remember that organic farms and crops are not only sustainable but also pollinator-friendly. These practices help protect bees, pollinators and other wildlife from toxic chemicals. They help organic farmers manage their farms in a manner that fosters biodiversity and improves the availability of natural resources. And the best part - according to a research, eating organic food can decrease the amount of acne that surfaces on face and body.

Organic nuts and seeds:

Despite being high in fat and calories, nuts and seeds help you lose weight. These are superfoods that are crunchy, filling and loaded with vital nutrients like magnesium and vitamin E that most of us don't get enough of. These nuts are packed with healthy vitamins and minerals like copper, zinc, vitamin A, C and E among others that encourage a glowing, smoother looking skin.

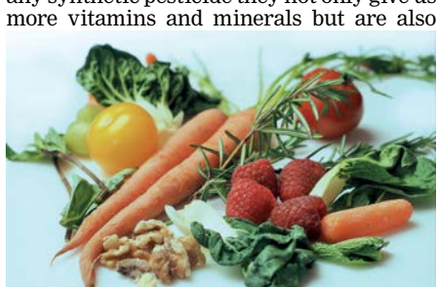
These require almost no preparation, so they're easy to just add into your routine.

Organically grown berries:

Rated amongst the world's most popular health foods, these tiny yet delicious and nutritious fruits are very easy to incorporate into our existing diet because they just blend into any of our regular daily food. When organically procured, these become powerhouses of immunity building nutrients that upscale your health naturally. Also, berries help reduce skin wrinkling.

Organic vegetables:

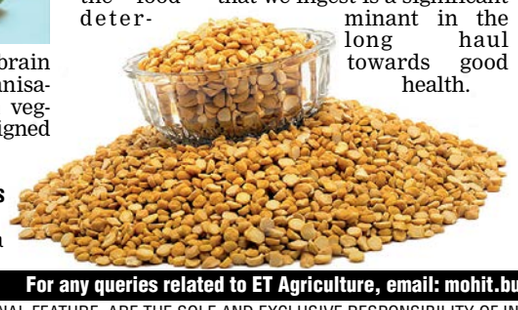
Since these are grown in a field without any synthetic pesticide they not only give us more vitamins and minerals but are also extremely beneficial for our gut and brain health. More and more small scale organisations are pushing organically grown veggies into the market and it's time we signed up to get some on our table.



Organic grains, pulses, legumes, millets and flours

Organic grains and millets have a higher nutritional content than their conventional counterparts with much fewer additives. They are packed with vitamins and other antioxidants making you healthier and fitter. Not only are they high in nutrients and fiber, but regular consumption of these foods will help reduce obesity and chronic inflammation.

So, whether you wish to alter your diet or simply add these organic foods to your routine, Switch to organic now because that's the only way to live a natural and healthy life. We know that yoga and exercise play a pivotal role in staying healthy and fit, but the food that we ingest is a significant determinant in the long haul towards good health.



Farmcult - Transforming lives with clean cultivation

Farmcult is a bootstrapped Agritech startup cultivating exotic vegetables in the biggest indoor vertical hydroponics farm of the region, Chandigarh. This urban farming company is decentralizing the production and distribution by growing vegetables closer to the consumption area, minimizing the time between 'Farm to Fork' and reducing the carbon miles. Farmcult provides its customers fresh vegetables within hours of harvest which are clean, fresh and 100% chemical free.

Pritpal Singh, Founder of Farmcult and MBA graduate from IMT, Nagpur carries loads of experience in protected cultivation of vegetables. Understanding the need of the world we are living in today, Farmcult realizes that organic and chemical-free food intake is the most natural way to keep our immunity strong. The Agritech startup uses precision farming techniques and latest technology at their disposal to grow vegetables that are nutritious and free from harmful chemicals.

At Farmcult, the vegetables are grown without using soil in a tech enabled indoor farm. Hydroponics is a technique of growing plants in a stream of nutrient rich RO water which is circulated in a closed loop. Since the crops are grown in a protected environment, it eliminates the use of harmful pesticides and chemicals.

Prtipal Singh, Founder - Farmcult

Farmcult - Hydroponic Vertical Farming

Farmcult is establishing a strong customer base in the Chandigarh tricity market and the founder now plans to expand the operations in other metro cities.
